AVAA C214 Active Bass Trap

Get rid of the low-end resonances in you room!

There's nothing more annoying than having invested in a good hifi system and not being able to enjoy good sound because of low-frequency resonances in the room. Our active bass traps are the smart, compact solution to the problem.

Benefits:

- Compact timeless design
- Works from 15 Hz to 160 Hz
- Absorption only (no phase cancelling)
- No need for calibration
- Automatically detects what needs to be absorbed
- Simply place it where there is a lot of pressure
- Can be controlled via an App

What the press says:

The new PSI Audio AVAA C214 is truly a wonder device. We would venture to say that this is a Product of the Year for Alpha Audio. A compact, active bass trap that does its work without any coloration and actually makes things better.
- **Alpha Audio**

Listening to a wide variety of music, with special emphasis on bass test tracks, I again felt the AVAAs made an immediately noticeable difference. The more important point was that the difference was always an improvement. With the AVAAs, bass was better balanced and more natural.
- **The Absolute Sound**

An active bass absorber which acts to create a virtual 'hole in the wall' such that direct bass sound waves no longer reflect back into the room from the vicinity of each AVAA unit. This evens out the bass response dramatically and reduces LF resonances and LF reverb duration.
- **Sound on Sound**
